

Create custom video training files with Edge enCapture

enCapture is a powerful video capture software that records the actions taken on the computer screen and Easily create wmv, mpeg or avi files from your desktop. Great for creating software training, demos, tutorials, and additional material to enhance presentations enCapture supports text annotations, sound, and screen notes.

enCapture records all the screen activities such as the movement of the mouse, the processes of applications, the inputs from the keyboard and all the way to the execution of any programs. Save your computer screen actions and share them across your intranet with others in your organization. Create demonstrations for customers and save them in a movie format compatible with almost every system. No need to download flash or other special programs to run the screen capture.

Easily train complex software applications and procedures quickly and easily by using enCapture to create a step-by-step tutorial.

Great for students and professionals. No need for large classrooms or travel, and it is available anywhere – anytime. The voice record capabilities offers even more robust training materials, allowing instructors to describe the steps, as well as, show them.

Use enCapture to create video help files for your software applications. When used in addition to manuals, video files can help users to better understand your software. The video help files will empower the user with a better understanding of your software and more readily use it.

Create content rich Standard Operating Procedures for your organization

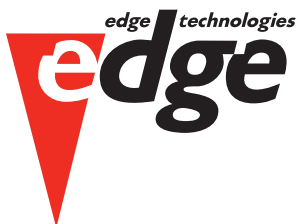

With the addition of sound and video, new personnel can quickly learn, follow step by step and engage their tasks. Create the ability to see and hear processes first hand, not just reading from a text.

enCapture offers a wide variety of solutions for organizations from creating training files to creating engaging demonstrations.

The ability to capture the screen and voice over activities in a movie format increases the ability of an organization to grow the users knowledge and productivity. It assists in creating documentation for software, processes and many other functions in an organization.

enCapture Benefits

- increased training resources available locally and across distances.
- ability to create on the fly updates to processes, techniques and procedures.
- create robust training tools.
- assist with complex problems with minimum effort.
- create visual Standard Operating Procedures (SOPs).
- create problem solving procedures visually.

Creating an environment to quickly train, evaluate, and demonstrate procedures can take a great deal of time and energy to produce and maintain. In most cases, the person with the proper skill set needs to take time from their tasks to create these snippets of their activities to pass on to others. With enCapture this ability to pass information is greatly enhanced, providing an environment to quickly produce these training sessions (demonstrations, evaluations, how to, etc.) on the fly while taking care of daily requirements.

Often it can take weeks to months for new procedures, techniques, or training on new software to reach the intended recipients. With enCapture this can be shorted to hours or even minutes. As a new procedure or technique is discovered or mandated or new software is implemented, enCapture provides the organization a fast and easy way to deploy the new information in video format. This saves the organization from spending hours documenting, creating, and disseminating the information across the organization.

To better illustrate the abilities of enCapture, here are some examples used to enhance an organization's ability to disseminate information.

Create how-to videos

Starting applications is one example of how enCapture can be used to quickly show the procedure without creating large documents containing multiple screen shots and lengthy explanations.

Fill in complex forms

Whether created internally or externally, enCapture creates a video to show the form and step-by-step instructions for completing the information required and provides the ability to explain the information needed in each block.

Troubleshooting assistance

The ability to record errors in programs greatly enhances a technician's ability to see and troubleshoot problems. It also allows an organization to build a comprehensive knowledge base with both the problem and resolution in video format.

Not just for business applications

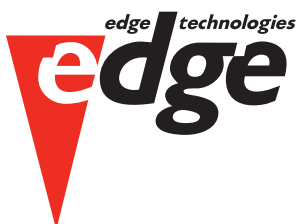

enCapture allows users to capture gaming experiences. Start enCapture and begin game play to record all of the action and store it for playback later. The video is now ready to disseminate to other players or just save for review at a later time.

With enCapture, the amount of time it takes to create the needed documentation is the same as the amount of time spent doing it in real time. The result is the ability to quickly change, train, and disseminate in the amount of time it takes to complete the task.

Whether creating step-by-step instructions, full classroom instruction, or capturing game play, enCapture will speed the process resulting in time, resource, and cost savings. Business professionals, teachers, and gamers can all benefit from enCapture's capabilities.
